CE Cleanrooms Introduces Paragon

2026 NHIA Innovation Award Finalist

A Compact Two-Room Cleanroom System for Compounding and GLP-1 Sterile Pharmacy Environments

CHICAGO — CE Cleanrooms is introducing the Paragon Cleanroom System at the National Home Infusion Association (NHIA) 2026 Annual Conference. Paragon has also been recognized as a finalist for the 2026 NHIA Innovation Award, highlighting innovation in sterile pharmacy environments.

Paragon is a standardized, compact two-room sterile cleanroom platform designed for fast installation, with USP <797> and <800> compliance built directly into the system.

Based on decades of experience in custom cleanroom design and construction, Paragon is designed for home infusion providers, compounding pharmacies and GLP-1 pharmaceutical operations. Its compact footprint and innovative construction allow facilities to become operational quickly, even within constrained spaces.

The system combines three integrated components: Modus, an advanced HVAC system that manages environmental control; Nexus, which continuously monitors temperature, humidity and pressure; and Edge (Patent Pending), a coving system designed to eliminate interior 90-degree corners and support effective cleaning.

Together, these elements create a coordinated architecture designed to reduce the complexity of conventional cleanroom construction and operation.

“Compliance risk is one of the biggest concerns pharmacy operators face when building a sterile environment,” said CE Cleanrooms. “Paragon was designed to remove much of that uncertainty. It brings together our team’s decades of experience in custom cleanroom design and delivers it in a standardized system that allows pharmacies to move from construction to compliant operation much faster.”

Because Paragon is a standardized system rather than a fully custom build, pharmacies can deploy compliant sterile environments more quickly.

Additional features include walkable hard ceilings, removable low-wall air returns, integrated HEPA filtration and lighting, room-side service access to mechanical components, and a seismically rated structural system.

About CE Cleanrooms

CE Cleanrooms is a specialty design/build cleanroom firm focused on sterile compounding pharmacies and other regulated environments.
